

Syed Anas Ali

Head of Manufacturing Excellence | Industrial Engineer

Karachi, Pakistan | syed.anasali0994@gmail.com | +92-3442608158 | <https://www.linkedin.com/in/syed-anas-ali-3a9836133/>

PROFESSIONAL SUMMARY

Strategic and results-driven Industrial Engineering professional with 8+ years of experience leading manufacturing excellence, lean transformation, and large-scale capacity optimization initiatives in textile industry. Proven expertise in implementing SAM-based systems, designing efficient layouts, and deploying KPI-driven performance management frameworks.

PROFESSIONAL EXPERIENCE

International Textile Limited — Head of Manufacturing Excellence

Apr 2025 – Present

- Designed and implemented a structured hiring and onboarding mechanism for sewing workforce by integrating HR and Quality functions, ensuring proper skill assessment, grading, and deployment aligned with production requirements
- Established a comprehensive daily efficiency monitoring system and converted it into an organization-wide KPI, enabling real-time performance visibility and structured performance management across all sewing floors
- Led organization-wide training sessions for production leads, supervisors, and staff to ensure adoption of reporting systems and to build a data-driven culture focused on accountability and continuous improvement
- Developed and implemented a SAM-based planning system across stitching operations by incorporating style-wise SAM into monthly planning, enabling accurate capacity planning and early-stage performance tracking
- Led company-wide capacity recalculation initiative across spinning, weaving, and stitching by standardizing capacity definitions and creating a documented model for load vs capacity analysis
- Implemented visual management system through KPI boards across all production floors, enabling management to perform quick Gemba reviews and assess floor performance without dependency on reports
- Actively involved in feasibility studies for process improvement and automation projects across multiple departments including spinning, weaving, and processing, supporting management in strategic decision-making
- Led multiple capacity enhancement projects by redesigning layouts and executing them from concept to implementation, improving space utilization, material flow, and production throughput
- Driving Kaizen initiatives focused on material handling optimization, scrap and wastage utilization, and cost reduction, contributing to measurable operational efficiency improvements

Utopia Industries — Manager Industrial Engineering

Nov 2022 – Mar 2025

- Played a key role in master planning of a 47-acre greenfield automated facility with 100,000 lbs production capacity, ensuring alignment of layout, flow, and future scalability
- Led Industrial Engineering function across weaving, processing, and cut-to-pack operations, ensuring synchronization between departments and balanced production flow
- Executed multiple layout redesign and capacity enhancement projects which improved product flow, reduced material handling, and minimized bottlenecks across operations
- Developed and deployed KPI dashboards and reporting systems across departments, enabling structured performance monitoring and visibility for management

- Collaborated with cross-functional teams including production, planning, and engineering to identify inefficiencies and implement sustainable process improvements

Al Karam Textile — Deputy Manager IE & Projects

May 2021 – Nov 2022

- Contributed as a core member of organization-wide manufacturing excellence initiatives, driving improvements through Industrial Engineering tools and Kaizen methodologies
- Developed a centralized Industrial Engineering database covering SAM, efficiency, labor productivity, and machine utilization, enabling structured planning and performance tracking
- Led design and layout development of a 180,000 sq. ft centralized quilting facility, optimizing cut-to-pack flow and improving operational efficiency
- Implemented SAM-based planning model integrating style-level details, improving traceability, production planning accuracy, and cost visibility
- Represented organization in customer meetings and presented Industrial Engineering systems and improvements to international clients including IKEA and Target
- Worked closely with cross-functional teams to identify process gaps and implement structured improvement initiatives across departments

International Textile Limited — Operational Excellence Executive

Jan 2018 – Apr 2021

- Designed and implemented cellular manufacturing layouts for terry products, resulting in 40% increase in production capacity, 40% reduction in WIP, and 20% reduction in rework
- Led complete setup of stitching unit with capacity of 31,000 lbs per day, achieving 24% productivity improvement, 29% space reduction, and 26% manpower optimization
- Contributed to factory expansion planning including capacity alignment, inventory reduction, and layout optimization to support business growth targets

EDUCATION

MBA, Institute of Business Management (IoBM)

Graduated 🎓 2026

BE Industrial Engineering, Dawood University

Graduated 🎓 2016

CORE SKILLS

Manufacturing Excellence — Lean Manufacturing · Kaizen · Process Improvement

Planning & Analysis — Capacity Planning · SAM · KPI Systems

Operations Design — Layout Design · Visual Management

TECHNICAL SKILLS

AutoCAD · MS Excel · MS Visio · MS Project

CERTIFICATIONS

Certifications: ISO 9001:2015 Internal Auditing · ISO 9001:2015 Awareness
